PUBLIC WORKS DEPARTMENT**

PROJECT UPDATE

Project Name:

Airport Water Reclamation Facility Phase 1 Expansion Project

Date:

August 1, 2014

During 2010, the City contracted with a professional engineering firm to complete the Sundog Wastewater Treatment Plant (WWTP) and Airport Water Reclamation Facility (WRF) Capacity and Technology Master Plans. The study revealed that wastewater BOD and TSS strength at both treatment plants have nearly tripled since the most recent upgrade (1998) lowering the treatment capacity for the Airport WRF to 1.2 MGD. Currently, average daily flows to the plant are 1.1 MGD; therefore plant expansion is necessary to handle committed capacities and projected growth in the area. The treatment capacity recommended for the next phase of the Airport WRF was established at 3.75 MGD. Three phases are recommended from the Master Plan with a total recommended build-out capacity of 9.6 or 15 MGD (dependant on the City's decision for one centralized treatment plant in the future).

The City has completed contracts with Water Works Engineers for the design of the expansion project and PCL/Fann Environmental Joint Venture as the Construction Manager at Risk (CMAR). The final design plans were completed in early Fall of 2012. The CMAR contract for construction was awarded by City Council on October 23, 2012 and the notice to proceed for construction was given on November 12, 2012.

The contractor has finished construction of the new plant. Commissioning of the new plant is starting on Monday August 4, 2014. The contractor and engineer will be helping with commissioning for a month. The contractor will be working to convert the old oxidation ditches to equalization (overflow) areas and the old administration building into the new lab.

Truck traffic will be minimal with equipment deliveries and construction vehicles to the project. A mill pave of the plant entrance road is scheduled for August 11.
