

UTILITY PROJECT

Airport Well No. 3 Equipping February 1, 2015

This project consists of equipping the well with a new pump house, water transmission main to tie into the new system, and construction of an arsenic treatment plant. The project is located north of the Prescott Airport in ranch land and will have very little impact on the public throughout the duration of construction.

Fann Environmental was the low bidder on this project and started construction on November 11th. The project is 99% completed. The well may be on line producing water within a month. The access road to the well site ties into Ruger Road north of the Ruger manufacturing facility and then crosses to the south side of Bottleneck Wash. Heavy equipment may be encountered on Ruger road as it enters the construction site however there should not be any traffic delays.
