PUBLIC WORKS DEPARTMENT**

**PROJECT UPDATE**

**Project Name:**

Demerse Avenue Reconstruction

**Date:**

August 17, 2012

Demerse Avenue Reconstruction: The purpose of the project is to reconstruct Demerse Avenue from Whetstine Avenue to Montebello Lane. The project included new concrete curbs, asphalt pavement, upgrade of the old water system, installation of drainage improvements, and installation of pedestrian access improvements.

Spire Engineering, LLC is the contractor. Construction was substantially completed on May 25, 2010, however, due to some defective asphalt, pavement remediation was necessary on a portion of the project. The work included selective milling, paving and utility adjustments. Spire completed the remedial work on June 10, 2011.

The construction is complete as of June 10, 2011, but there are still some administrative tasks that Spire needs to complete to close out the project.
