## SUNDOG TRANSFER STATION FLOOR SLAB REMEDIATION PROJECT

***SEPTEMBER 1, 2015***

The primary objective of the project is to improve the floor in the Transfer Station where solid waste is dumped and pushed into a pit for loading into transfer trailers. The existing floor slab has been worn down and requires remediation.

In November, 2014, proposals were requested from design structural engineers. The firms were ranked and SCS Engineering was the top ranked firm. After an initial study was conducted a contract amendment was executed on 6/24/15 to proceed with design work. Design work is currently underway.
