

CONSTRUCTION ALERT

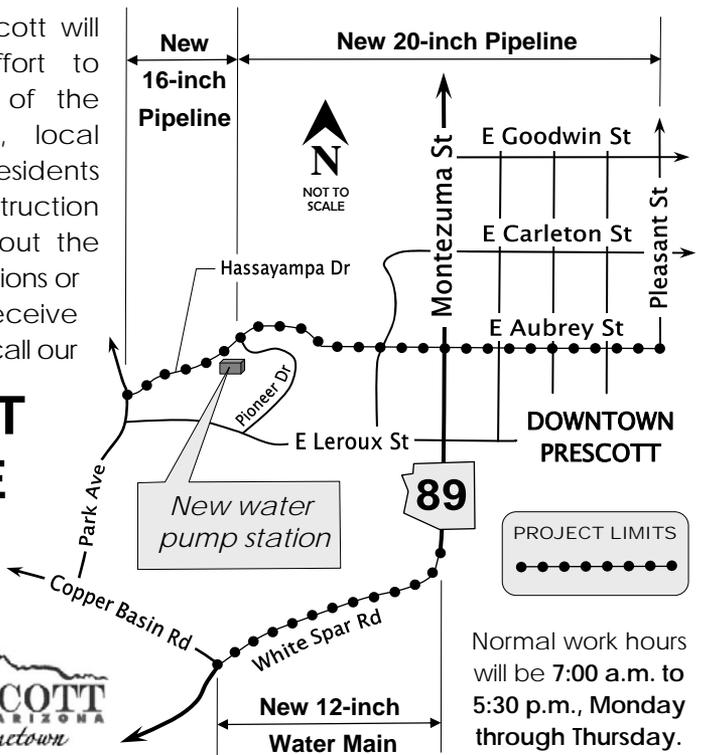

CITY OF PRESCOTT UTILITY UPGRADE PROJECT

The City of Prescott is starting construction to upgrade water service utilities in the downtown area. This project is designed to upgrade and improve various distribution mains and a pump station within the city's water system Pressure Zone 39. These system upgrades, consisting of replacement of aged and undersized facilities, are necessary to meet current and future water demand, as well as enhance public safety by increasing fire flow capability.

Please be aware that upsizing of water mains are being constructed along the following neighborhood roads: **Hassayampa Drive, East Aubrey Street, and White Spar Road.** Additionally, the existing water pump station near the intersection of Pioneer Drive and Hassayampa Drive will be rebuilt to meet future water capacity needs. Construction is anticipated to be complete by spring 2010.

The City of Prescott will make every effort to keep members of the traveling public, local businesses, and residents informed of construction impacts throughout the project. For questions or concerns, or to receive project updates, call our
