

UTILITY PROJECT

CHINO VALLEY TANK PROJECT

February 9, 2018

This project will consist of design and construction of a new 5 million gallon welded steel water tank. The new tank will reflect the nominal dimensions and exact base elevation of the current tank located at the City's Water Production Facility in the Town of Chino Valley, and will be located to the east of the existing tank. The proposed tank location will require grading and engineered fill work for the tank pad as well as piping to connect the tank to the existing system. The project will include some minor landscape work, and site security will be incorporated into the new tank project.

The construction project was awarded to Fann Contracting on May 9, 2017. The tank is substantially complete; the interior coatings are curing and should be ready to fill the tank by the end of February. There are no impacts to traffic or residents anticipated with this project.
