ROADWAY PROJECT

Streets Division Snow Equipment Facility

MARCH 8, 2023

As the Sundog Wastewater Treatment Plant at 1500 Sundog Ranch Road is decommissioned and operations relocated to the Airport Water Reclamation Facility, portions of the old site will be repurposed. The Streets Maintenance Division will be incrementally relocating their operations to vacated portions of the old treatment plant.

The project involves construction of a concrete slab on grade and the installation of the spreader racks and associated snow removal equipment. The design is such that a building can be constructed in subsequent phases to enclose the spreader racks and other snow removal equipment and materials and protect City employees from inclement weather while gearing up for snow removal.

Kimley-Horn is the engineering design firm. The construction contract was awarded to Danson Construction on September 13, 2022, and construction started in December 2022. The concrete footings and slab have been poured, and assembly of the steel structure is nearly complete. Installation of utilities are underway.
